

Special Trolley Design

P-811

P-Engineering designs – and delivers – Trolley for Special Assignments.

Pictures from unloading Fuel Vessels from a Large Cargo Aircraft – Tupolev – on the Greenland Ice shelf. The Fuel Tanks were a part of upgrade of the infrastructure on a Military base.

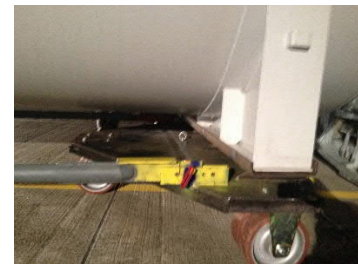

The design to accommodate that the aircrafts internal crane rail was not long enough to fully onload the vessels free of the ramp. Furthermore, all assembly solutions for fixating the vessel onto the trolley should be designed for operation with gloves as the outside temperature could be as low as -30°C .

P-Engineering can help you design and fabricate the trolley bespoke to fit your needs. The Trolley can be manually operated or operated with electrical motor and battery package.

Contact us for a Quote on either engineering or engineering and delivery of special trolley and similar solutions.
