

Plantware

Project Visualization

Visualize this...

PlantWare can perform project visualization of any type of plant

- Ship and harbour installations
- Process installations
- Buildings and factories

PlantWare base our visualization on 3D Plant Design tools from AVEVA Ltd.: PDMS.

This means that we are able to predict quantities for steel structures, pipe installations, cable trays etc. enabling our clients to budget accurately and optimize project cost at an early stage.

Visualizations can be made as

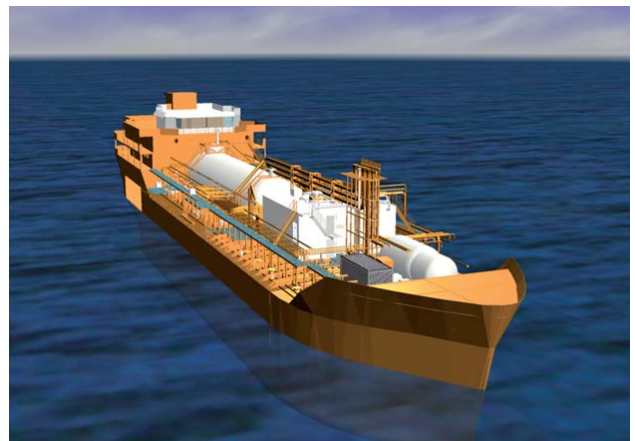

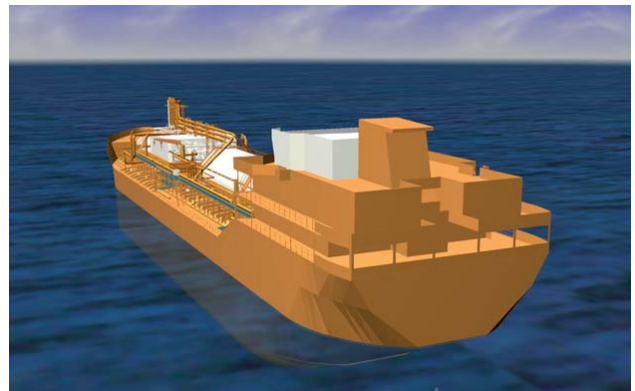

- Pictures
- AVI-movies of a walk-throughs
- Interactive presentations and walk-throughs
- Interactive drawings such as 3D PDF drawings with rotating and zooming possibilities

Furthermore, we can produce the input data for SLA-modelling or other kinds of rapid prototyping enabling us to present a detailed scale model of the installation. This is helpful during the early stage of project planning.
